WEST COAST ITEMS.

-A Valparaiso telegram of the 24th says that various capitalists are proposing to establish a ship building yard in Chili, which will be capable

of building any kind of a ship. —A Santiago telegram of the 24th inst. says the state of General Baquedano, the Chilian commander in the Peruvian war, is considered desperate, and that a fatal result may be expected at any moment. A telegram of the 25th, how reported a slight improvement in condition and on the 26th he was reported to be out of design.

the 26th he was reported to be out of danger. -Seftor Errazuriz, the new Chilian president, is spoken well of by all ranks and conditions of men. Especially he is in favor of the grealest economy in all departments of the administration, and naturally, therefore, is opposed to that compelition in armaments which has been going on for some time between Chili, Argentina, and Brazil. The opposition, too, is reported to have behaved with exemplary moderation, and everything looks favorable for the new government.—
The Statist, London, Sept. 5.

THE RED LAKE. Lake Morat, in Switzerland, has a queer habit Lake Morat, in Switzerland, has a queer habit of turning red about two or three times every ten years. It is a pretty lake, like most of the sheets of water in that pacturesque country, and its peculiar fieak is attributed to a disposition to celebrate the slaughter of Burgundians under Charles the Bold, on June 21, 1476. But the French say that it blustless for the conduct of the Swiss, who in that battle grave the Burgundians unconstruction. that it binslies for the conduct of the Swiss, who in that battle gave the Burgundians no quarter. The old fishermen of the lake, who catch enormous fish called silures that weigh between twenty-five and forty kilograms, say when they see the waters of the lake reddening, that it is the blood of the Burgundians. As a matter of fact, some of the bodies of the Burgundians killed in the battle were thrown into the lake, while others were lossed into a grave filled with quicklime. This historical recollection angered the Burgundian soldiers of the victorious armees of the republic of the resulting of the soldiers of the victorious armees of the republic of forcal recollection angered the burgunuan soldiers of the victorious armies of the republic of 1798 so much that they destroyed the monument raised in honour of their compatriots who fell heroically in that battle, and Henri Martin very justly reproached them for that puce of vandalism. It would have do to attribute the residence of I would hardly do to attribute the residening of the waters of the lake to the blood of the soldiers of Charles the Bold. The color is due simply to the presence in large quantities of butle aquatic plants called by naturalists Oscillatoria rubescens. The curious thing about it is that Lake Morat is the only lake in which this curious growth is developed, and the peculiarity is beginning to inter-

IF ALL the telegraph lines of the world were combined and stretched in one straight line they would reach 881,000 miles, or enough to encircle the earth nearly thirty-seven times.

From the N. Y. Journal of Commerce, Aug. 3 THE PASSING OF SILVER.

From the M. F. Journal of Commerce, Aug. 3.

THE PASSING OF SILVER.

There was a period in ancient Greece when the common currency consisted of copper rods called obeliskoi, hence the obolos, or small copper coin of a later period, and as many of these as could be easily grasped with the hand constituted the next higher monetary unit, the drachma, still the name of the principal coin of Greece, but in tables of weights generally called the dram. After a time, by trade with the Phoenicians, and afterwards by voyages of their own to Spain, and still later by the development of the mines of Laurium, the Greeks came into possession of silver. Every one desired silver far more than copper; perhaps it was foolish, bot it was just as universal as the need of food or the love of country. As everyone was willing to exchange for silver than of copper, silver ingots, and finally coins, came to be the usual money. Now the interesting thing is that the royal Greek who made the first silver coins hung up a drachma of obeliskoi in the temple of his favorite deity as a memorial, and thereafter copper rods ceased to circulate and silver coins replaced them, and if there was any political party at that time that said the copper rods were the money of the rich, and especially of foreigners, Phoenicians, Iberians and the like, there is no record of it.

Silver displaced copper because it was more valuable. A smaller piece would

Silver displaced copper because it was more valuable. A smaller piece would command a greater amount of service, a

greater quantity of merchandise. Silver answered the purpose of money for a long time because for centuries the wages of time because for centuries the wages of labor were low and there were inrely large financial transactions. Rome had so small a monetary unit that the prices of such banquets as made Lucullus famous are ex-pressed in millions, but the masses of the people were extremely poor, and copper and silver were quite valuable enough to express the sums that came to them,

and silver were quite valuable enough to express the sums that came to them. As civilization advanced commercial operations became more extensive and values assumed greater proportions; the wages of labor rose, and gold began to replace silver as silver had in its day replaced copper, and for identical reasons—it was more valuable; a given value could be represented with a smaller brilk. The advance of civilization has cartied with it the increasing compensation of the great mass of the population and something more valuable than silver is required to represent conveniently the earnings of the average man. A man who is earning \$12 a week would receive on Saturday night more than a pound of coin; this would not be convenient, and for that very teason gold has been displacing silver.

The only trace of the copper age in finance now to be found among civilzed nations is in Portugal, where the treasing holds as security for the government notes, gold, silver and copper. The silver age in finance is slowly following the copper age.

gold, silver and copper. The silver age in finance is slowly following the copper age, and for the same teason. Almost every and for the same reason. Annost every civilized country now has the gold standard, or is typing to get there, or is floundering around in a morass of inconvertible paper which it hopes some time to redeem in gold. For us to go back to the silver standard would be like Mexico or Japan series bette cooper. Silver is convenient. standard within he free action of paper going back to copper. Silver is convenient for small change, and so are nickel and copper, but the wages of labor in civilized countries are now too high to permit of silver being a convenient full legal tender. silver being a convenient full legal tender. Silver is the money of the poor man in a different sense from that meant by the silverites. It is the money of the poorly paid laborers as compared with the well paid laborers; the money of the working population of Asia and Mexico in distinction from the better paid laborers of France, Germany and England, and the still better paid laborers of the United States. An American mechanic who earned four dollars day would find his week's wages weigh about two and a quarter pounds. If his a day would find his week's wages weigh about two and a quarter pounds. If his wages were as low as they are in China or Japan silver would do very well to pay him in. The real significance of the symbol 16 to 1 is that the wages of about sixteen Asiatics paid on the silver basis equal the wages of one American paid on the gold basis basis.

the Cepton Observer, August 4th,

COFFRE IN COSTA RICA.

Costa Rica has long been noted as an Costa Rica has long been noted as an important coffee grawing country. In our latest summing-up of the coffee production of the world, Costa Rica is put down for a total export of 325,000 ewt, and the crop has ranged between 300,000 and 400,000 ewt, for some time. It is evident that there is room in this state, as in other Ceptral and South Apperican states, for a large expansion of the area under coffee, but two, if not three, factors operate in delaying this process:—(1) the limited and oncertain labour sapply, (2) the difficulties and costliness of transport, and (3) in some cases the want of settled government. As oncertain labour supply, (2) the difficulties and costliness of transport, and (3) in some cases the want of settled government. As the cases the want of settled government. As the last it is of litterest to learn from Mr. J. L. Shand—who bas been over to report on Costa Riea cuffee lands—that there is no prospect of trouble in the state under review; while he considers the two other obstacles may also be overcome in respect of the large enterprise which has been the subject of his inspection and report. In the first place it is worth noting some respects in which Costa Riea and the Ceylon hill-country may be compared. They do not differ much in latitude, both on the north side of the equator—Ceylon about seven and Costa Rica ten degrees north. The hilly country may be said to lie between two seas or oceans and rises in both cases to 7,000 or 8,000 feet at the highest; and although full and reliable meteorological returns are wanting for Costa Rica, the seasons seem wonderfully to agree in both countries; the dry season in both being from January or February till May, the rest of the year wet with occasional dry intervals in August or September. In some parts the rainfall must be more abundant

in the far west state, for Mr. Shand in the fat west state, for Mr. Shand speaks of one extensive forest covered plain in the compares to the Dombari valley sa thousand fert above sea tevel—but with 150 inches of rainfall. And this lump, in a to the one great factor on which the two countries differ: the incher soil and consequently bigger farest, larger and stioner coffee bushes or trees and immensity superior coffee errors per acte, gatheret in C state. bushes or trees and minutes by superior coffee crops per acte, githered in C sta Rica. On this point there can be no mistake; all evidence goes to show such returns up to a ton or two tons of coffee per acte (from limited areas) as fully justifies an estimate of 15 cott, per acte average over no less than 1500 actes, which it is proposed to open and plant on the concession Mr. Shand has inspected. For ourselves, who have never seen Costa Russ—and with the question of sufficient labour to be considered—we should have been ready to put the estimate down in 15 to 12 very; but the sidered—we should have been ready to put the estimate down at 10 to 12 cwt.; but the tetum, as estimated, shows so large a margin of profit—the estimates being by mercantile men who have another independent report besides Mt. Shand's to guide them—that, even if half were taken off, there would still be ample justification for going on. Then, as regards the mode of planting, cultivation, harvesting and especially of preparation, it is interesting to learn that Mr. Shand does not really think there is much to be taught the Costa Kicaos. The Ceylon system of clean weeding is quite inapplicable. The soil is so rich as to bear The Ceylon system of clean weeding is quite inapplicable. The sud is so net as to bear any strain put on it. Finin 3 × to 400 coffer trees per acre are croingly to yield the crops spoken of ; and to clear and h ap no the carth for a limited space round each tree seems upine enough. In preparing cuffee, especially, the people with the aid of "Gordon pulpers" chiefly—the late John Gordon at one time had a factory in Kindy extensive stores and barbacines (all celled). Gordon at one time had a factory in Kundy—extensive stores and barbacines (all called "beneficios") excel, Costa Riem coffee selling up to 1c7s, per owt. The great difficulty is in the "harvesting"—since, owing to the searcity of labour, there is only, as a rule, one "plucking" when ripe and miripe cherries are all palled off together, so making the outcome often very innequal. In this direction there is from for reform if only the needfal number of "hands" can be got. It is surprising to learn that the native Indians do no work on the plantations, only the Costa Ricans who pride themselves on being pure Spaniands; and the president and his government are very anxious to have more Europeans—poor Spaniards or Italians—introduced and settled in the country, to develop coffee lands while supplied with develop coffee lands while supplied with huts or cottages and gardens for their own use.

own use.

So far, the part of the country chiefly planted with coffee has been that called 'the interion' surrounding the capital, San José, and alongside the tailway. In many places such gardens or fields have been used up so far as coffee is concerned; and then the trees are pulled up, grass or jungle encouraged for a few years, and then sometimes coffee planted again. But Mr. Shan't found also a good deal of the old coffee country yielding such pour results, that it is thought very likely the penule working on it would be glad to be transferred to the Sanapiqui concession, where they could earn more and he better off.

Pending the publication of the reports

earn more and he better off.

Pending the publication of the reports referred to, and the prospectus of the Sarapiqui Estates Company—which is likely to be sapported by several Ceylon men in London—we need not enter more into detail. The company is to have a capital of £120,000 and deals altogether with a concession exceeding 22,000 earcs, most of concession execeding 22,000 acres, most of it magnificent brest-land for coffee, and running from 1,000 to 7,000 feet above sentevel. Cacao, sugar, hancins and tobacco are spoken of as subsidiary products; but it is possible subsidiary separate companies may be formed for these. In respect of siving of labour, "spouting" (or "flumes" as locally known) is likely to be largely used in Surapiqui; and no less important may be the utilisation of river carriage to bring the crops to the sea, hoats already plying for a considerable distance.

We have said enough, however, to show concession exceeding 22,000 acres, most of

considerable distance.

We have said enough, however, to show that the Sarapiqui Company, established in London, to develope coffse in Costa Rica, is likely to be an important, and we trost, for the sake of enterprising countrymen taking it up, a very successful undertaking. Ceylon can have no jealoosy in respect of "coffee-growing"; while there is no chance of "tea" being entered on (profitably) in any part of the Americas.

THE SKIN AND BATHING. By Dr. Andriw Wilson, 111.

IN DR. AMBRIW WILSON.

111.

I said in my last article, when I discussed the cold bath and its uses, that cold water, thus employed, could not be rehed upon for cleinsing purposes. When we desire that the skin should be freed from its accumulated dust and secretions, we must use hot water and scap, or the equivalent of hot water in the shape of hot vapour. The cold bath we staw to be a stimulated and a tome, and if, as is the practice with many persons, set be dissolved in the water of the cold bath, its tonic effects become increased, in so far as its skin action is concerned, and we imitate, in this way, the benefits of bathing in the sea. It has been often pointed out that in the case of many persons, otherwise willing to take a cold bath in the moming, there may be difficulties experienced in practising the habit of cold sponging, on account of want of accommodation. A man may have no bath, and it may be impossible for hun to use a tub-a-although, here, as elsewhere, the old saying about the will and the way has a distinct application.

But if it be impossible to obtain a cold bath, and if, as is only right, the person objects to relinquish or remit that Inxury in the moning, he may find a fair substitute in what is known as the rest forcel or verslovet. Indeed, this plan may be followed with advantage by those who are too delicate to withstand the shock of plunging into a cold bath itself. The towel must be a thick one. It is dipped in cold water (or it may at first be dipped into water with the chill off) and with this towel the body should be quickly and smartly rubbed. Then a dry towel will, of course, be used for the purpose of a final rub down by way of restoring the circulation. The wet sheet is used very much in the same way, but, of course, the whole body being thus enfolded at once in the sheet there is a closer resemblance in this practice to the cold bath itself than is seen in the case of the wet

at once in the sheet there is a closer re-semblance in this practice to the cold hath itself than is seen in the case of the wet towel. The process of rubbing down with the dry towel afterwards should not be de-layed, as there is greater risk of chill, per-haps, involved here than is the case with the actual sponge bath itself. It may readily be seen that we aim constitution.

haps, involved here than is the case with the actual sponge bath itself. It may readily be seen that we aim at getting reaction here, just as in the case of the cold bath itself; and so long as the reaction takes place, and the blood returns vigorously to the skin, imparting the feeling of warmth, we may be sure the bath is doing good. The warm bath has an average heat of from 12 to 98 degrees, while the hot bath varies from 98 to 112 degrees—at least these are fair average limits of temperature respectively. What are the effects of a warm bath on the skin and body? No doubt a first effect is that of raising the temperature of the skin and also of the blood circulating through it. When we examine the pulse, we find its beats to be quickened, this fact indicating that the heart is being stimulated to increased exertion. Again, the breathing is quickened, and this latter fact implies that the waste matters given forth from the lungs (and notably the culturic acid gas) are increased in quantity. It is evident in this case that we obtain from the hot bath a stimulating. tably the cathonic acid gas) are increased in quantity. It is evident in this case that we obtain from the hot bath a stimulating effect, similar in some degree to that seen in the case of the cold bath. The later effects of the warm bath on the kin itself, must not, however, be overlooked. The pores of the skin-which are the openings of the sweat-glands—are relaxed, and the of the swear-glands—are relaxed, and the glands themselves are stimulated to action of increased kind; and if, after leaving the hot bath, the person goes to bed, it is probable that the reaction will assume the form of a profuse perspiration.

of a profuse perspiration.

It is in this relation that the risk of cold and chill after a hot bath becomes an important consideration. It is obvious that, in the stimulated and relaxed condition of the skin and its glands, great care must be taken that any sudden cooling is avoided and guarded against. When we catch cold, we often do so on the principle first named—that is, when the skin is heated and its pores open after exertion, we allow ourselves to be chilled, and thus react upon our lungs or other organs with untoward results. serves to be crimed, and thus react upon our lungs or other organs with untoward results. If this happens, we get the blood rapidly driven inwards from the skin; the internal organs become congested and overfull of blood, and disease is thus set up.

The uses of the warm or hot bath may be summed up, first, by saying that it acts as a cleanser of the skin, especially where

we associate with it the use of soap. The relaxation of the skin, and the opening of the sweat-pores, are actions which cause the skin to discharge its duty of getting rid the skin to discharge its duty of getting rid of waste more actively, and the soap readily removes the surface dirt which the skin contains, together with the old worm-ont cells or particles of the skin itself. Secondly, the hot bath causes an increased circulation of blood, and this represents a stimulant action on the body. It has well been said that while a cold bath stimulates the body directly, a warm bath does so by encouraging an increase in the actions of its various organs. Thirdly, a warm bath (not excessively hot, that is) has a distinctly reviving and refreshing effect. After great muscular exertion, the effect of a warm bath in reviving us is very marked. It seems to act on

sively hot, that is, has a distinctly revenue and refreshing effect. After great muscular exertion, the effect of a warm bath in revising is is very marked. It seems to act on the muscles in a most efficient wave by doing away with their rigidity and stiffness, and by increasing their suppleness. People have been known to do without sleep after great exertion when a warm bath has been taken. It is said that Napoleon was enabled to undergo great fatigue for prolonged periods without sleep by aid of warm baths. That the warm bath has a soothing influence cannot be doubted, for a feeling of contentment, if not of actual drawsiness, is often experienced during the bath.

The value of the hot bath in warding off the effects of chill may again be mentioned here. There is no better preventive of cold and other more serious ailments than a hot bath. If it is taken at once, and if the sufferer in addition goes straight to bed (between the blankets) and takes a hot drink, the probabilities are that the excess of perspiration which will conse will save him from perhaps a serious illness. The reaction, here, takes place through the skin, and the congestion of the internal organs which has taken place in consequence of the chill, will be relieved. Of course, we must see that no subsequent chill is taken through the too rapid evaporation of the perspiration.

THE THIRD CANDIDATE.

THE THIRD CANDIDATE.

The democratic sound-muney convention at Imlianapolis has, as was expected, reportlated the Cheege convention, and numeated candidates of its own—General Palmer, of Illmois, for the presidency, and Mr. S. B. Binckner, of Kentucky, for the vice-presidency, Mr. Cleveland having positively refused to be put in monitation. The convention declares for the maintenance of the gold standard, and also for sustaining the parity of every existing dollar; and further, it wisely declares that the present currency system should withhlaw altogether from banking husiness. Of course the convention represents only a minority of the democratic party, but its acts are important for all that, and no shoult will lave a considerable influence upon the elections. It was feared that many democrate wander fefuse to support Mr. McKinley if he was opnosed only by Mr. Byan, on the ground that they could not vote for a probibilitive tariff. Now, however, suand democratic candidates are non-instead who are opposed to high tariffs as well as to the free contage of silver. It may be expected, therefore, that every democrat throughout the country in the desires to maintain the circle of the country in the desires to maintain the circle in the population and the probability that Mr. Byan will, in all reasonable probability, he much greater than the gain from the probability that Mr. Byan will be defeated by a large majority. — The Statist, Lumdon, Sept. 5.

RIO DE JANFIRO, SEPTEMBER 29th, 1896.

The Italian minister, Sig. Renate de Martino, artis of here on the 23nd on board the content Tremonte. Yesterday he presented his credentials to President Prudents de Martes, and negotiations for the prompt seulement of the conflict between the two goar timents will be initiated without less of times. We are glod to say that the reception of Musister de Martino his been cordial and that a disposition has been shown on both sides to treat the disposition has been shown on both sides to treat the disposition has been cordial and that a disposition has been shown on both sides to treat the disposition has been cordial and that a disposition has been shown on both sides to treat the difficulty is not due to any faint of the Brozilian government, but rather in the insane paads, of a small number of agitators, undisciplined boys and nowlies in two or three crites. The government itself has been anxious to find a satisfactory solution to the questions which have arisen between the two rations, and the measure proposed would inquestionably have secured that result. Unfortunitely, other and less judicious counsels prevailed, and the government is now compelled to face not only the corginal questions at issue, but also others of a more serious character arising from insults to the Italian flig and improvided assuits on the Italian gradient in this country. Fortunately the mob has kept quiet since Minister de Mautino's arrebegioning to see that international disputes are best settled through diplumatic charantels, and not by burning fligs in public, by mob processions, and by persecuting injdiensive originals. If they have really reached this conclusion, the result of the conflict will in the wholly improductive of good. Although the Italian minister is showing much varied the whole information which as effecting and honorable people could not give.

The large and apparently increasing number of Italians emigrating to Augentina clearly proves two things: their dis-atislaction with the existing situation in Brazil, and the folly of paying out public money for the introduction of colonists. In regard to the first, it should be frankly recognized that the immigrant comes here principally to better his own condition. He has no philonthropic motives about the salvation of Brazilian planting interests, nor about the divelopment of the country. He may have been anxions to escape the military burdens which weight so heavily upon many countries in Europe, and to leave the privations which poverty and lack of work have imposed upon him, but his principal object has been and will continue to be that of making money. A small minority, principally North Europeans, will also be looking forward to the acquisition of a home and the education of their children, but the

great majority will think only of better opportunities to carn and sive money. If they are unable to do this in Brazil, it may be considered certain that they will go elsewhere at the first opportunity, remedy, then, for this emigration is to prove their wage-earning condition. wages paid on the plantations, when trans-formed into gold, are certainly not entic-ing, and when the costs of food and clothing, and when the costs of bool and clothing are considered, they are decide by insufficient. For the wage-earners the situation here is not an attractive one, even though many have managed to do lairly well in the execution of contracts, or piece-other. work. In our opinion, it would be infinitely better for the government and for the immigrant, were the government to supply them with public lands, in 25 and 50-hectare lots, at a low price and in localities Convenient to markets Their labor would convenient to markets. Their labor would then he available for the planters in the busy seasons, and they could cultivate their own holdings at other times and with the aid of the less robust members of the household. Such a system would permanently locate them in the country and would increase the augregate of production as well as dispersion by well-activities. as well as diversify the products. The planter would have to pay more, perhaps, for their labor, but to offset this he would not have the expense of providing for the location of a large force of laborers which location of a large force of laborers which is needed only a part of the year. As for the second consideration above mentioned, its application is apparent. The government is expending millions on the introduction of immigrants, who are now leaving the country by hundreds in order to settle in a neighboring country. At the lowest calculation, these immigrants, or colonists, cost the public breasure are millioners. cost the public treasury 250 milreis per capita, and for this outlay the country derives no benefit whatever. To maintain an expensive immigration bureau and expend millions on the passages and support of colonists, who are free to leave Brazil for Argentina as soon as they please, is surely a very foolish waste of money. And, in the opinion of many, Brazil is not now in a position to squander her revenues in this prodigal manner.

THE amendments officied to the budget

by Deputy Glycerio on the 26th inst. afford a fair illustration of the financial measures which are likely to be adopted by this congress. Instead of going to the root of the trouble, makeshifs will he proposed and passed for temporary relief, or the correction of mere symptoms. Placing forty thousand contes in gold (or one hundred and twenty thousand contes in currency) at the credit of the Bunco da Republica in Europe, will not help the situation one moment after the cash has been expended. It is designed, of course, to bulster up exchange, on which that bank has already lost heavily, and to enable the government to meet its obligations abroad without entering the exchange market here. Certainly, some improvement can be realized in this way, but will it be sufficient to counterhalance the sortifices which the government must make to obtain the money? The government has made this same experiment before, and has always lost money by it, but somehow it has never learned that it is better to leave the exchange rate alone. As for the use of the gold bonds deposited in the treasury to guarantee the bank emission, it can not be characterized as anything else but a breach of contract and a subterfuge. When the issue of bank notes began, gold was first deposited in the treasury as security, then government bonds, then [as in the case of the Bunco Popular] a mere promise to pay Later on the government, the latter taking over the default. Then the issues of all the banks were transferred to the Banco da Republica, to which the deposits were credited. Then it was proposed to transfer the issues to the government, the latter taking over the deposits (whatever they may be) and becoming responsible for the relemption of the currency, but this project has not been adopted. And now it is proposed to transfer these gold bonds to Europe to the relief of the same bank against whose currency issues they are held, and to permit that bank to transfer the expenditures and for gambling in exchange! This will of course end the securit

dition to this, the Sao Paulo deputy proposes to replace the issue of cedulas (homes) by another issue of paper money, which will greatly augment the amount in circulation and thus serve to further depreciate its value. And he proposes to do this in spite of the recent redemption of some thirty thousand contos and the pledges given, notably in the conditions of the last interior loan, for the redemption of the issues already made. The project for redeeming the currency with the proceeds of these operations is of course a subterfuge. To redeem one issue of paper by another and a larger one, is a financial feat worthy of such a financier. As for the conversion of the deposits abook accounts?) now held by the government into mongage bonds, this must be considered as a preliminary step toward another scheme for "assisting agriculture," Surely the planter might be left to himself for a few years, and congress might devote the time saved to a little much needed legislation regarding taxation, legal procedure, education, industrial development, domestic commerce, transportation, etc.

WITE the city of Buenos Aires is adding to the number of its public parks, and opening wide avenues for the accommodaopening while avenues for the average tion of an increased traffic, the city of Rio de Ianeiro remains stationary. The capital of Argentina is rapidly becoming celebrated for its public spirit and the attractiveness of its great thoroughlanes and parks, while the capital of Brazil, older and with greater natural advantages, is celebrated only for its narrow dirty streets, its celebrated only for its narrow dirty streets, its celebrated only should this be? Rut de Juneiro could be easily made one of the most attractive cities in the world, and yet it is a by-worl for all toat is offensive and perilons to health. It has a magnificent harbor, full of beautiful islands and surrounded by little bays and hills of marvellons attractiveness— and Argentina is rapidly becoming celebrated hills of marvellons attractiveness — and there is not a single pleasure boat on its waters, nor a single pleasure resort along its waters, not a single pleasure resort along its shores. It is surrounded by strikingly-beautilin mountain ranges and peaks, full of magnificent views and lovely nocks,—and yet it is a trial of one's bortitude and patience to visit even the most accessible of pittence to visit even the most accessible of them. In the city, there are but few edifices worth visiting, the streets are narrow, crowded, dirty and badly paved, the hotels are barely second rate, the restaurants are nearly all bad, the parks few, small and uncomfortable, carriage-hire is exorbitant, the amusements are questionable, and there are no drives whatever. The people are authorized without conductive to the conductive conduc one no drives whatever. The people are apathetic and without public spirit, and the government is uniformly bad. Why is all this? Are the people of Rio de Janeiro willing to drift into a second, third, or fourth place on this coast without a word of protest? Are they willing to have their polation irretrievably ruined by incompetent and mercenary politicians, and not make one single effort to assert themselves? There is money enough expended in this There is money enough expended in this cut to give it really valuable improvements. The amount expended on a great retaining wall on Santa Thereza to improve the private property of an influential personage, would have gone far toward widening and improving some of the narrow, crooked streets which are now obstructing traffic. The unnecessary wall begun in Botafogo bay, which is not now necessary, would have gone far toward improving the Saude district from which originate so many of district from which originate so many of our fever epidemics. And the persistent retention of such mismanaged services as that of the Santa Cruz abattoir, which is a source of annual deficits, although a source also of much patronage and private gain, studis in the way of many an improvement in the food supply of this city which would go far to improve the health and comfort of its papulation. There are so many improvements required, so much intelligence and experience in government wanted, so much energy and public spirit lacking, that it seems hopeless to expect anything else from its officials but petty political intrigue and unending jobbery. Its government costs enough to warrant us in expecting a little dedication to the interests of the public, but such expectations are never realized. In the meantime, we continue to pay high and ever-increasing taxes for the privilege of maintaining a decaying business in dirty, badly-paved streets and of living in unsanitary localities. It is worth the citizen's thoughtful consideration whether it is worth by efforts to maintain. source of annual deficits, although a source worth the citizen's thoughtful consideration whether it is worth his efforts to maintain so unpatriotic and unprogressive a municipal government.

It is interesting to note that the l, reto revolt, which occupied considerable attention a few months ago, was based largely, if not solely, on the expectation of support it not solety, on the cape caused or applied from the Brazilian states of Amazouras and Paul. It is evident that promises of support had been given, and it is also evident that a very considerable number of people in the Amazou region were in full sympathy with the revolt. The press of Paul and Mandos openly favored the movement and were suspiciously well informed of its beginning and objects at a very early day. Still inither, there was an open discussion in the press of the future minor of all the lattice grand our of the great state which was to result. In one of these armics, union of the revolting Petruvian department with the Amazonius states of Irrazl, was expressly advocated, and it was prophesied from the Buzdian states of Amazonas expressly advocated, and it was prophesied that in good time the Amizonian deputients of Bohya would also fellow this movement. It was argued, and not without mosen, that the interests of this eter-ntinies are identical, that the Amazon is mores are identical, that the Anazon is their natural nuflet, and that their prosper ity and future greatness depend upon their union. It was not stated that the Brashan states of the Anazon valley would then declare their independence, but it is not unknown that this is the dneam of more in that givest betting. Threats of separation were not inknown in the days of the morarchy, and the same feeling still risks. Then as now the revenues of those district, derived from export taxes on finest putderived from export taxes on forest pr derived from export taxes on first products, were largely in excess of their local expenditures, and the surplus was transferred to Kno de Janeiro. While a number of slates are mable to support themselves, an imany others are mable to committee anything toward the support of the national government, Para and Amazonas have always had hall transmitts and have been calmid to the control of the property of the support of the property of the support of the property of the support of the government, Para and Amazons was had built trastants and har e been calliable founts of revenue for the support of the costly political and abdinistizative machinery kept running in Rio de Janeiro. The Amazonians have long chafed under this, and they have not hesistated to say that the time is coming when all this will be charged. In all probability therefore the Loreto revolt was not only a part of this ambitious scheme, but was secretly encouraged by the people of the two Amazon states. It is now known that Col. Seminario expected prompt assistance from them, and when belearned that the Bazalim government at Rio de Janeiro had not only taken prompt steps to prevent the tendering of such assistance, but also us shut him off from communication with the outside world, he assistance, but also to shut him off from communication with the outside world, he at once saw that his came was hopelose. Under instructions from Rin de Janeiro the Brazilian consul at Iquitos refused to hobi any communication with him, he could not procure arms and amountation, not could he open up trade with a neighbor on whose sympathy he had commed. He therefore gave up the struggle and withdrew from the country. Whether the Amazon valley is to form one great homogeneous political unit, or not, the indications are that zon variety is to form one great homogeneous political unit, or not, the indications are that the first step toward that en! has failed, and that, not, through the inability of the two Brazilian states to meet their promises.

the most left chains of balian subjects,

A Rio telegram of the 26th in the Common of A. S. Tonkos says that the remarks which the Indian minister had prepared for the necasion in which he was to deliver his credentials to the President, wrrend such a character that the government declined to pa unit them. As the minister refused to multiplify the speech it was a tranged that the credentials should be presented without any famal speeches. The stery is very much to be donlined, —On Sanday evening limiting No. 51 Rina do Laxradio was totally destroyed by fire and adjoining buildings ap and 53 were considerably damaged. The fire was discovered at 6 µ, in in the tribus's shop, on the gound floro, belonging to Manuel Iglesias, who had left that moving for S. Paulo, The 1st flour was occupied by lodgers and at the lack of the building there was a tenement house with 12 rooms. Building No. 49 was occupied by a shoe factory, insufed for 15,000\$\frac{8}{3}\$, and, the new Italian with the ne

hack of the lumbling there was a tenement noise with 12 rooms. Buthing No. 29 was occupied by a shoc factory, insured for 15,000\$, and No. 53 by a hortel, insured for 15,000\$, and No. 53 by a hortel, insured for 15,000\$, and No. 53 by a hortel, insured for 15,000\$, and No. 53 by a hortel, insured for 15,000\$, and the new Italian minister called on the manusce of foreign affair-and asked for a day and lorar to be fixed for presenting his credentials to the President. He afterwards had with Visconde de Calo Fro a long talk, which, arounding to the Noticia, was very cordial. The minister, says that paper, warmly shook the Visconde's hand and addressed him in Friench many agreeable remarks. Afterwands, a cording to the same raper, the Visconde and the minister of foreign affairs had a talk.

—The press hall drafted by a committee of which Meleinose Allunuerupue is chairman, is a phenomenon. It requires a signature to every atticle published, even tiems and extracts from foreign papers. It authorizes not only prosention, but suspension. In our humble opinion, such a law would be unconstitutional. It should be memembered that Medeirose Albuquerque was editor of O Tonyo some time ago, a paper whose onlyagens hields and falsehunds were notanious. However, it was jacobin, and that gave it heense. —It is to be hoped that the differences between Italy and Bazal will be speedily settled. Italy has quite enough upon her hands just naw, and it would be extremely unfortunate it she were drawn into another serious dispute. On its side, the Bazalman guernment must led that it is hound it protect the laves and properties of all residents within its jurisdiction, whother respect to nationality or religion. It is quite true, of course, that riots occur in countries far more orderly and advanced than Brazil, and, therefore, that the Brazilian government must led that it is hound in what has happened; but great governments always hasten to express their regret for rattacks upon foreigners within their privadiction, and nor really to

ed civilised.— The Statist, Sept. 5.

PUBLICATIONS RECEIVED.

Appeals to the 23d Annual General Report of the Common of the Common of Foreign Bondsholters, for the year 1895. This valuame of 37d pages is a record of shame and dishom—a record of the berrowers who have obtained invuey almost and them have reputiated as himset par ment. And foremest among them all stands Argentina, owing one £36,000,000 principal, and nearly £9,000,000 interest on public loans, besides other coormous among them all stands Argentina, owing one £36,000,000 principal, and nearly £9,000,000 interest on public loans, besides other coormous among the stands of the state of the first continuation of the continuation of the first continuation of the continuation of the continuation of the continuation of the first continuation of the continuation of the first continuation of the first continuation of the first continuation of the continuation of the first continuation of the first continuation

RAILROAD Notes

—The state of Rio de Janeiro has given per mission to Joan Stelling to construct a railway, ac historices long, from Vassumas to the station of Mendes on the Central line.

—On the 24th a petition was presented to the chamber by Sr. Americo Werneck asking for a railway from S. Francisco, Santa Catharina, to some point in the state of Parana.

-Last Sunday on the switch at Engenho de Dentiu un the Central tailway a man was um over and killed by a train. A man who was with Inn threw himself flat on the track and thus escaped.

—The treasury has lately advanced 200,000% to the Leopoluma company on account of the interest guarantee on the Carangola branch. The govern-ment appearintly prefers to do this than to permit the sate of the line.

"The Argentine executive has approved of contact entered into heliwen the national rail hoard and the Billiain Lacomotive Works for supply in 4 locomotives for the Andrie line, a price of \$55,000 gold.

—The governor of the state of Minas Geraes has been authorized by the legislature in contract with the Barco Inicasalor de Melhoramentos for completing the construction of the tailway from Juão Comes to Pirangs, advancing for this purpose on a suitable guarantee tree money required for the work.

—During the months of May, June, July and August, the Mogyana company collected taxes for the Minas Geraes government at the stations of Oberalia, Uberahmla, Conquista and Sacramenta to an aggregate if 43.8548291. These taxes con-sist principally of interstate fullets on imports and Sanotts. exports,

—The director of the Carioca line is now cam-plaining of the insinuations directed against the new electric line on Santa Thereza to frighten people away. He should bake in ministice. The complaints are based on the bad administration of that trainway. If he will pay some attention to the convenience of the public, he will have us cause to complain.

—For the months of April and May (!) the re-ecipts and expenditures of the Paulo Affonso line [government property] were as follows:

	April	May
Receipts	4,271\$520 14,607 482 10,335 962	4,022 8 168 15,959 888 11,937 720

—The survey made by experts on the books of the Central railway shows that the shortage of the treasurer, which has been growing ever since May 10, 1891, when it was 640,3188236, amounted on April 17, 1895, to 5,556,5438946. The following statement shows the amount of the shortage at the end of each year from 1891 to 1894:

,	
1891	1,513,906\$892
1892	3,433,698\$867
1893	3,817,420\$129
1894	5,524,444\$480

It appeas that thining all this time the treasurer was never required to present accounts and that his hooks are full of Islanks and alterations. In the payma-fr's office the experts found no hooks at all, but from other sources they learned that over 7,000,000\$ had been placed in the hands of the payma-ter and divers sums varying from 1,000,000\$ to 2,000,000\$ and hor in the hands of his axsistants, and that none of these officers have yet accounted for the money so received.

THE CENTRAL DEFALCATION.

THE CENTRAL DEFALCATION.

In an ellitorial introduction to the report of a committee appointed to examine the looks of the Central radiway, to determine the amount of the idelacation recitiest in the treasurer of that road, the Jornal do Commerce of the 20th inst. says:

"Alteraly during the last days of March 1895 we amounted in a vorta webrich that the delelacation of the treasurer had reached five thousand contos of reis—which thew upon us the harsh observations of a collegue who accused us of defaming the best employes of the republic. To-day we are officially aminorized to fix the defalcation in the enominous sim of Rs. 5,556,5438048.

"From the report of the experts..... supposition."

sum of Rs. 5,556,543\$4945.

"From the report of the experts,... surprising things are brought to light:—Since October 1891 the extreasmen has paid no money into the treasmy, nor the balances remaining at the end of each year; he opposed countless obstacles to the opening of the safe; the book entries were in a perfect chains—behind time, corrected, emissel; the inspectors (fiet) without having rendered accounts for many months, being meanwhile responsible for thousands of contos, etc., etc.

"It is necessary to read the whole of this esta-

thousands of contos, etc., etc.

"It is necessary to read the whole of this catalogue of gennine horrors, and to remind the scaudalized reader, as a con-plement to these horrors,
that the extreasurer is free, walking about freely
and even posing as a martyr."

The Jornath has much more to say in condemnation of this monumental scandal, but our time sad space does not permit its reproduction. The
above, however, shows the decadence into which
the Brazilian government has fallen.

Business Notes

A telegram of the 25th from Parahyba says the cutton crup in that state this year is very large.

—The state government of Balia has annulied the contract for the introduction of Chinese im-

migrants.

—Susticipation lists for raising money for the publication of an organ for lisss Glycerio's party are in enculation.

—It is staned that the duty of 1\$200 per kilo on impured heer is equivalent to \$500 \(\frac{\pi}{2} \) of the enst of the article in Europe.

—The present tubacco crop of Baltia is estimated at 400,000 kales, ur 2,000,000 arribas. Its value, at the average price of 17\$ per anoba, is \$34,000,000\$

oooş
The east of the electric plant, which has been ordered from the United States for lighting Espiran Santo do Pinhal, S. Panlo, is estimated at 130,000\$.

The Campus insurance companies have resulved to abandon the carge of the wrecked steamer Campus because of the difficulties of transporting the salvage.

print Salo of Timms, S. tamo, as Scientists, 130,005.

—The Campus insurance companies have resulted to abandon the eargy of the wirekel steamer Cimpor hecause of the difficulties of transporting the salvage.

—The hudding erected for a cotton factory at the station of S. Pedio do l'enjury is offered for sale. Tenders for its purchase will be received up to the 85t piox.

—The givernor of Minos Geraes has placed the elegiposition of the projectors of an industrial expussion to be held in that city.

—The Jornal los Brazif of the 25th inst. says that the transaction will industriate the "Ourn Falla" gold mines, in Minos Geraes. The Jornal says that the transaction will ling out to Bazal between a million and a half and two millions of france.

—The project of the druggists of this city against the exaggerated duties impused on drugs and medicines has been presented to congress. It ought also to cover prejudicial classifications, such as that of calling Scott's Emulsion published in the Jornal do Commercia the profits of the Companhia Metropolitana on the \$50,000 colonivits with Metropolitana on the \$50,000 colonivits have been imported at public cost, the government of the contract with the Companhia Metropolitana, on which some 150,000 colonivis have been imported at public cost, the government agreed to pay 167½ frances for the same object. This shows where the national revenues are going.

—In the contract with the Companhia Metropolitana, on which some 150,000 colonivis have been imported at public cost, the government agreed to pay 167½ frances for the same object. This shows where the national revenues are giong.

—In the contract with the Companhia Metropolitana on which some 150,000 colonivis have been imported to public cost, the government agreed to pay 167½ frances for the same object. This shows where the national revenues are giong.

—The reconsequirement, or surrender of land or street-wide sing purposes, is still causing much delay and trouble in the refuilding of edifices on certain situations. A

The thritten linkdays shove meanined are an unlineky number. Why not add ist Apill to the list?

—The hanch factory established in this city for the manufacture of Murray's fluid magnesia is now in full operation, and is supplying the genuine article at a price which pathy in the period of the imported article to 38000, and or supplying the genuine article at a price which path is to see at 18500 retail. The tariff put up the price of the imported article to 38000, and osceniel this prubbitive daty, were about to reap a rich reward on their patriotic efforts when the fureign amunifacture came in and spoiled their plans. The genuine preparation will of course be preferred, and the patientic conspirators will now turn their attention to something else.

—The Minas Geraes government has cabled to its superimendent of immigration in Europe to open agencies in other countries than Haly to avoid receiving innuigrants of one nationality alone. One of these agencies has been opened in Spain and another in Portagal. The state pays 122 francs passage money, one half of which is retained until the immigrant has been settled in statistic for a period of 60 days. This measure is taken to avoid the importation of immigrants for officer states. The Mineiro has always been eclebrated for the care with which be loaks after his own interests. Were the national government to do the same, there would be less minney wasted.

—The state legislates and for an establishment for premaying jerked beef, preserved meats, meat extracts, etc., in that state, to be located to the care with which that state, to be located between the Rio Grande and Rio Parnahyba. An interest guarantee of 7 per cent. on a capital up to 2,000,000S is also authorized, or an equivalent subcention, for a period of fer years, on the first establishment of that description founded by private enterprise. The project is a mistaken one, in our opinion, for it is very doubtful whether this region can produce cattle cheapy enough to complete with foreign packing and curi

—The minister of finance says that the reason why the tax of 1/10 % on transactions in exchange has not been collected is that this tax is payable in stamps and none of the idealers in exchange have seen in the buy the stamps required for this purnose.

purjose,

—The Compaulia Commercia de Lenha e Mateines, a company emgaged in the fire wood trade, with a capital of 1,500,0008, paid during the year ended on the 30n of last June taxes to the amount of 22,864,8599 and dividends to the amount of 22,864,8509.

nd 22,863,#2nn.

—A Pernambuco telegram of the 24th says that a meeting of sugar planters and merchants has been calcult there for the 30th mst. to consider the pumposal of a large number of planters to produce only Demanara [liw granles] sugar which can be exported freely in the United States.

Coffee Notes

The expert duty on coffee in Bahia is 17 per . This is higher than in other states.

—The rypert thuty on coffee in Bahia is 17 per cent. This is higher than in other states.

—The government of Paraginay has resolved to encurrage onfice growing. Prinhably it is looking for a new source of revenue.

—We are informed that the coffee plantations in Rio de Janeur and Minas Geraes are already in blossom, and that their appearance is exceptionally favorable. It is rather early for tolossom, but the winter has had very little readly cold weather and larly it has been warm and dry, which will protably account for this early blossoming.

—The two limites of congress at Bogota, the Colombia acquital, have passed a law abuishing the export thuy on coffee. The imports of coffee into this country from Colombia are not large, but there is hardly any limit to the possibilities of our flee production in most of the countries in South and Central America, therefore, Colombia may in time become an important source of supply for us.

—Merchanti Review, New York,

—Dr. Henregne Dimmont, a S. Paulo planter, reports to the Journal do Commercio final, according to present influentings, the next coffee crop will be below the average. He claims to have learned this lay personal observation in the districts of Prassumiurae, Casa Branca, S. Simão and Ribeitão Pieto and in have received instanton to the same effect from other paris of S. Faulo. It must be said, however, that blossoming has as yet hard-than in Rio and Minas.

—The Commercio de S. Paulo in an iocoffee plutter delitorial of the 20th inst. tells the coffee plutter.

than in Rio and Minas,

—The Commercio de S. Paulo in an itonical editorial of the 20th inst. tells the coffee planter that he has nothing more to expect from the government. He has been essentially republican and received many favors from the republic (did he not received them also from the monarchy?), but now the times are changed and he can expect nothing more. The marshal, who created paper money at will, is dead. The government right reduce the export tax, but this, the Commercio links, will benefit the foreign consumer rather than the planter. Formerly when exchange fell the price of coffee went up; now they are falling together.

Financial Notes

-The mint has received orders to ship 30,000\$ in nickel to the Santos custom house.

in nickel to the Santos custom-house.

—Executive degree No. 2,352 of the 21st inst. makes an appropriation of 618,7598 for the pay of senators and deputies from Sept. 15 to Oct. 14.

—An Amcaji telegram of the 24th says that the Sergipe state treasury has a surplus of 176,0008 at present. In all probability it will not have it long.

—The President has asked congress for a supplementary credit of 132,8098908 for the mint to meet expenditures in the manufacture of nickel and cupper coins.

—The war department needs are supplementary and couper coins.

and experiments in the manufacture of nickel and exper coins.

—The war deparlment needs more money, and the President has accordingly sent a message to congress asking for another deficiency appropriation. The sum for which he applies on this occasion is 2,500,280\$744.

—The governor of Minas Geraes has signed the bill, voide by the state legislature, empowering him to contract, on such terms as he deems advisable, a loan of 65,000,000 frances or its equivalent in pounds sterling, at the rates of 25 fr. 20c. per f.

—The government has opened an extraordinary credit of 102,509\$200 for the current expenses of the Fennando de Noronha penal colony during the second half of the current year. It would be interesting to know why this expenditure was not included in the bulget.

—The Jornal do Bhazil says the freightage of the

reluided in the budget.

The Arrand do Brasii says the freightage of the Mexican United States and Carlos (Gomes, was arranged for Soo.). The President will ask congress for a credit to cover the expense. The Jornal do Commercia denies the statement, however, and says Messrs. Lage Brothers are making no charge for the steamer.

A singular illustration of the silver moddle is to be found in the subscription price of the Mexican Ureald, which is \$\frac{8}{3}\text{ sin Mexica}\$ (Mexican Styria) in the United States and Canada. And yet the Mexican Weald, which is \$\frac{8}{3}\text{ sin Mexica}\$ (Mexican Styria) in the United States and Canada. And yet the Mexican Weald which is \$\frac{8}{3}\text{ sin Mexican}\$ (Mexican Silver dollar has more silver in it than the American dollar and is worth more as bulloon. The difference is found in the fact that the American currency is on a gold basis.

There has been a large and increasing export of gold from Europe to the United States during the past month, to check which the Bank of England put up its discount rate to 2 per cent and then to 3 per cent. If appears that American exports to Europe have greatly increased during the last two or three months, and this has led to large shipments of gold to cover differences.

—It is stated that on the 30th of last June the cash in the banks of this city amounted to 136, 120,000\$. This, we presume, does not include the string of the superabulands, but on the lack of confidence. And for restoring confidence, we regret to say that we see no indication of any steps being taken.

To the revenue bill Deputy Glycerio offered on Saturiay in the chamber of deputies an amendment embracing the following provisions:—Security of the government for the sum of 40,000,000 in gold to be placed in foreign countries in the credit of the blanco the Republica; faculty of using for the purpose of promoting the respective transaction the gold bonn's deposited in the treasury by banks of issue; conversion of bound into papermoney; payment of patiential adment in relation to indebtedness incurred through the borrowing of bound from the Banco ta Republica; application of sums thus paid to the redemption of the paper money into which the bouns are to be converted; enversion into murtange bunks of balances of deposits in the Caisas Economicas (government savings banks). Moutes the Succorro, unclaimed property fund and orphans' tond.

Yo travellers on Land or Sea.

No traveller should forget to take with No traveller should forget to take with him a box of pills or a bottle of Tincture of Nectandra Amara, which might come very handy in cases of sudden nauseas or any other disarrangement of the stomach for intestines, so Irequent during travels This marvellous remedy is accompanied by a prospectus in three languages, viz Portuguese, English and French to facilitate its use among natives and foeigners. For sale at all Druggists and Chemists and a tho manufacturer's depot, No. 72, Rua S Pedro, 1st floor, Rio de Janeiro.

THE FRANKLIN TYPEWRITER.

"CUARANTEED THE BEST"

SOME DISTINCTIVE FEATURES

Simplicity.—Has fewer by six hundred parts than any other type-bar machine, in five seconds time, without touching parts than any other type-bar machine, thus reducing liability of getting out of order. Any intelligent person can un-derstand and operate it,

Durability.—All metal, except the keytops, platen, and feed-rolls. Constructed of the best material, by the most skilled workmen.

Alignment.—The type-bars are guided, thus ensuring exact and permanent alignment.

Speed .- The expertness of the operator is absolutely the only limit to its speed,

Visible Writing .- Every letter is shown as soon as struck, and the work remains in sight. Corrections are thus easily made, and context verified.

Manifolding.—The stroke is downward, direct, and powerful, making it the most perfect manifolder and mimeographer on the market.

Repairs.—Owing to every part being in-terchangeable, purchasers can almost in-variably make what few repairs may be needed themselves, thus saving cost of repairer. The machine is therefore ex-tremely economical.

Arranged for writing Portuguese, French, Italian, Spanish and German, without charging parts.

with hands.

Ribbon Changing.—No soiling of hands or loss of time in changing ribbons, the latter being recled from the spool on which it is purchased to the machine

Keyboard .- Has the standard keyboard. with capital shift, locking shift, and celluloid keys—the latter being black and white, as recommended by eminent oculists.

A Time Saver,-Owing to its automatic paper shift ribbon changing device, ease in making corrections, quickness of type cleaning, and the fact that the work is always in sight, it is the greatest time-saving writer manufactured.

Appearance. Without exception, the handsomest typewriter made, beautifully nickeled and japanned—an ornament as well as an article of necessity.

Work.—Its work is clean, clear cut, and beautiful in appearance. Samples che-erfully furnished upon application.

Price: \$90 with Table. M. M. King & Co.
